

MSE awarded REMO contract by FMV

2011-09-30, MSE Weibull has been awarded the contract to perform renovation and modification (REMO) of 75 units of the Swedish Armed Forces power stations.

The project, which is going to be performed at MSE Weibull facilities in Elmhult, embraces complete renovation and modification of three types of power stations, rated 100, 135 and 150 kVA. Among others, the generators are going to be exchanged in some of the power stations, as well as implementation of new functions and improvement of user friendliness and environmental properties.

MSE facilities in Almhult

MSE Weibull AB, the training equipment specialist, is a company based in the southern part of Sweden, having a long tradition of finding new solutions and integrating complex systems. For almost 60 years MSE Weibull has been working together with different military organisations and the defence industry to develop and produce advanced system solutions. Our specialty is simulators and training equipment, but with our strong competences in systems engineering, electrics, mechanics, electronics, documentation and life cycle management, we also provide our customers with services like upgrades and in-service support.
